### Automatic Satellite Antenna

- Total Weight: 13.8kg
- Useful
- Some detail
- Another detail
- High quality
- Power engine

The Mobilsat antenna is manufactured by Mobiltech in Italy who have designed a dish that is both new, innovative, designed and 'patented' for HD signals. Mobilsat is the only satellite antenna that can be updated from the touch screen control unit directly from the user. No more search fails due to frequency changes by satellite operators. Automatic tracking with DVB-S and DVB-S2 systems, able to manage the H.265 HEVC codec.

This Satellite is Equipped with a 68cm pentagonal shaped aluminium dish for maximum signal quality, reduced overall dimensions yet maintaining an aerodynamic profile while also withstanding winds of 150Km/h.

**ONE TOUCH:** With only one touch the system performs functions such as 'last memory', 'new search' or 'stand-by'. The system is programmed to perform a self-test every time the unit is switched on. If an error is detected the display shows the description and some tips to identify causes and solve the problem. Mobilsat has a dual search function, automatic or manual. Automatic is simply activated by pressing the power button, in case of poor reception or in-line obstacles the manual search can be activated.

**Fine Pointing:** This feature allows Mobilsat to be re-aligned with the desired satellite very quickly rather than perform the complete process of satellite search.  
**Smart Scan:** With this feature, Mobilsat is able to update or add any KU band satellite Anywhere in the World. The system downloads the full transponder list and shows the 30 most powerful with related power values and data. After download, you can select the Desired transponder and save as default.
